

ENTERPRISE CLASS GDPR COMPLIANCE PLATFORM

Reduce the cost of compliance reporting and safeguard your PII & intellectual property

Regulatory action following the General Data Protection Regulation (GDPR) legislation in 25 May 2018 was initially slow, leading to many organisations mistakenly assuming that the new law was nothing to fear. However, by the end of December 2019 the pace had quickened. European supervisory authorities had issued over 133 administrative fines, totalling €400,188,687.50 (approximately £342,600,000).

Fast forward to Q2 2020 and regulators continue to ramp up enforcement activity with over 68 GDPR fines totalling nearly €50 million in the first quarter of 2020. As the legislation matures, and regulators exercise the full extent of their powers, it is vital that organisations know what data they have, where it is and how it's protected in order to confidently demonstrate compliance.

Cloud Business can help you achieve this and reduce the cost of compliance reporting with our enterprise class **GDPR Compliance Platform** powered by eSpyder.

Our GDPR Assessment and Data Discovery Service provides peace of mind that your Personal Identifiable Information (PII) is being stored and accessed appropriately, reducing regulatory risks and exposure to penalties.

Why Cloud Business?

"Our approach is to work alongside our customers to protect their businesses, now and in the future, by developing security solutions aligned with their needs and their end users. In 2017 we partnered with eSpyder to provide GDPR compliance consultancy and to help our customers gain a competitive advantage through effective GDPR compliance."

Lee Duke, Director of Security

Cloud Business's **GDPR Compliance Platform** has been designed to support Data Processing Officers (DPOs) and ensure company compliance with GDPR regulations and best business practice.

Our GDPR Assessment and Data Discovery Service includes:

- Data discovery & review
- GDPR compliance assessment & implementation
- Monthly data discovery & reporting

eSpyder allows DPOs to respond to Data Subject Access Requests (SARs) quickly and easily.

It allows you to track your progress in terms of SARs processing and corporate data storage and retention.

Fully configurable for administrators and GDPR consultants, eSpyder supports efficient, highly flexible Search & Indexing configuration and deployment options, while integrating into existing IT environments without the need for additional server infrastructure.
