

Data Privacy & Compliance Service

Transform the employee experience so your teams can work **securely and compliantly** from anywhere on any device.

Cloud Business's **Data Privacy & Compliance Managed Service** minimises risk and enables greater business agility in the digital workplace.

As data privacy legislation matures, and regulators exercise the full extent of their powers, it is vital that organisations know what data they have, where it is and how it's protected in order to confidently demonstrate compliance.

At Cloud Business, we understand the challenges of the modern workplace and the potential risks from greater mobility. We believe that data privacy compliance can give our customers a competitive advantage, enabling them to increase business agility and mobility without compromising the access and sharing of sensitive and personal data.

Our Data Privacy & Compliance Managed Service provides on-going peace of mind that your Personal Identifiable Information (PII) is being stored and accessed appropriately, reducing regulatory risks and exposure to penalties.

Managed Service Includes:

Data Privacy & Compliance service has been designed to support Data Protection Officers (DPOs) and ensure company compliance with GDPR regulations and best business practice.

The service includes:

- Date discovery & review
- GDPR compliance assessment & implementation
- Automated monthly data discovery & reporting

Our Data Privacy & Compliance service has been developed to help organisations achieve effective data privacy compliance and become more competitive.

Once in place, our managed service, will operationalise the discovery and reporting of personal and sensitive data and automate key aspects of the Data Protection Officer's role. This "Privacy by Design" approach ensures GDPR compliance can be attained efficiently and cost effectively.

It is a platform and device agnostic solution that integrates into existing IT environments with no need for additional server infrastructure. It will scan PCs, laptops, data servers (cloud and on premise) regardless of location and get visibility to what data resides in each system or datastore.
