Young Epilepsy

“Compared to many technology companies I’ve worked with, Cloud Business stands out because of their flexibility, willingness to adapt to my way of working and how they bring the latest best practice to the table.

“We’ve engaged Cloud Business to provide a mix of IT support, developer, productivity, identity, messaging and security consultancy, with further projects in the pipeline. I’ve been most impressed by their communication as well as their deep knowledge of the technology we’ve deployed and the Microsoft 365 education space. Our account manager, is proactive and hands on, bringing together Cloud’s expert consultants who have all met my high expectations (and sometimes unreasonable demands).

“Cloud Business is very good at what they do. Microsoft 365 is continually evolving, and they keep on top of the technology and best practice, applying this to the diverse environment Young Epilepsy operates in. We deliver specialist services in the education, residential, and medical sectors for young people with Epilepsy and Autism. We also undertake research and provide professional training services, all creating a complex IT environment. Cloud Business fits right in with the idiosyncrasies of our sector, and we’ve had a very productive relationship over the last two years.

“I give them the highest recommendation and I’m a very happy customer.”

David Taylor, Head of IT at Young Epilepsy
