

EM+S Assessment and Workshop

Stay safe and **increase mobility** with a robust EM+S strategy

With security at the top of every IT agenda, we provide workshops to help you plan and implement Enterprise Mobility & Security around your Microsoft 365 and Microsoft Azure product suite.

We start by assessing your existing environment to better understand what you have and what you need, looking beyond today to understand future business requirements. Once we've determined your current landscape, we help envision the best environment for you, how to manage mobile devices and the best access and information protection.

An optional design module provides high level design documentation for each EM+S component, including identity and access management, managed mobile productivity, information protection, identity driven security and access and information protection.

On completion, you'll have all you need to plan your Microsoft Enterprise Mobility & Security roll-out, and with Cloud Business the perfect team to deliver it.

If you have yet to migrate to the cloud, we can help there too. We have a Microsoft Cloud Assessment service to help you start the journey to a modern workplace.

Speak to our team to discuss how we can support your organisation:

Key EM+S Workshop Features:

In our workshop, we'll review all Microsoft and Azure environments and assess where Microsoft EM+S will provide greater security through key product features.

Identity & Access Management:

Azure Active Directory Premium delivers multi-factor authentication; access control based on device health, user location and holistic security reports, audits and alerts.

Cloud and SaaS App security:

Microsoft Intune makes it easier to secure and manage iOS, Android and Windows PC's all from one console. Deep integration with Office 365 helps keep company data secure in the Office mobile apps.

Mobile Device and App Management:

Azure Information Protection provides persistent data protection of files shared internally and externally, including the option to track, classify and label data.

Information Protection:

Microsoft Cloud App Security provides deep visibility and control of data inside cloud applications.

User and Entity behavioral analytics:

Microsoft Advanced Threat Analytics helps extend the visibility auditing and control you have on-premise to your cloud applications.

Workshop Structure and Output:

The Workshop Day is in two parts and can be tailored to meet your specific demands with an emphasis on those areas most appropriate to your particular environment. Following each Workshop, a comprehensive assessment and recommendations document will be provided.

Part One:

Requirements gathering around the EM+S Suite

1. Mobile Device Policies

- Current and future
- Requirements
- Policies

2. Identity and Cloud Security

- Password self service
- Multifactor Authentication
- Cloud applications

3. Security

- Security requirements for company data
- Threat Detection
- Sharing data with other organisations

Part Two:

EM+S Product Envisioning

1. What is Enterprise Mobility
2. Hybrid Identity
3. Mobile Device Management
4. Access and information protection, including data leakage protection Mobile Device Policies

Design Module (optional):

High Level design document for each EM+S component. Prices based on individual business requirements, as determined in the Workshop procedure.

1. Identity and Access Management
2. Managed Mobile Productivity
3. Information Protection
4. Identity Driven Security
5. Access and Information Protection

Cloud Business EM+S Workshops are priced competitively to help customers put the right security measures in place around their Microsoft 365, Azure and Teams product suite.
