

Azure Review

Get the **best possible experience** from the Azure Cloud

Cloud Business has developed Azure Review to optimise your Azure environment and ensure you are getting the best experience from your technology.

Azure Review explores Azure and Virtual Machine usage, across the following key areas:

- **Cost optimisation** – ensuring your organisation is not over-provisioned and paying for more than you need
- **Resource configuration** – are your resources (including disk encryption, backups, disaster recovery and Network Security Groups) configured correctly?
- **Security** – explore your current security posture, whether you are delivering the most secure experience for your organisation, and what actions to prioritise in order to do so
- **Performance & health** – are applications, virtual machines, storage and networks monitored within Azure performing at their best? We measure performance, availability and operational excellence to identify opportunities to optimise your Azure environment further

We also include a discovery session focused on cost optimisation for your virtual machines.

The output from our Azure Review service is delivered in a management report based on the current Azure tenant, with our recommended actions. This includes areas to improve on cost management and security posture. The action list has a running commentary and prioritisation based on best practise.

At the end of the review we can continue to work closely with you to accomplish these goals and if required help you review your Azure and VM usage on an ongoing basis to stay ahead of the competition and the technology.

Why arrange an Azure Review?

An Azure Review delivers the following benefits:

- **Cost optimisation** - Make sure your organisation is not paying for more than you need
- **Drive improvements** - Delivers continuous improvement of your Microsoft cloud services
- **Performance** - Ensures Azure services are running at their best and take control of the utilisation and management of the environment
- **Environment** - Reduce carbon footprint by scheduling resources when you require
- **Security & compliance** - Understand your current security posture, compliance benchmark and prioritise actions to protect your organisation and people
- **Best practice** - Adopt the latest technologies in Azure in line with Microsoft best practisedards, with regular independent auditing

Why Cloud Business?

“We take a people-centric approach by putting our customers’ users at the heart of everything we do; led by people and their objectives rather than technology.”

James Butler, CEO
