HCL Domino Migration Services

Reimagine everyday with a seamless migration to Microsoft 365

If you're considering moving from HCL Domino to Microsoft 365, we can guide you through your product evaluation, help determine your business requirements, support your migration with minimum disruption, and help your end users successfully adopt their new modern workplace technology.

A migration from HCL Domino to Microsoft 365 is a relatively complex procedure that require a deep understanding of both technologies to plan and run an efficient and smooth project.

Cloud Business has in-depth knowledge of HCL Domino and, as a gold certified Microsoft partner, we're able to provide the broad range of technical expertise required, and the user focus essential to make any migration as seamless as possible.

A key aspect to any migration is the understanding of the existing environment and how that influences the migration process from old to new.

Our approach starts witjh a **Discovery and Planning Workshop** to define scope, the migration strategy, user adoption and training requirements, coexistence requirements, including high-level budgets and expectations for a successful and smooth migration to a workplace transformation.

Discovery and Planning Workshop

The first phase of any successful migration project is discovery and planning. We'll help you determine business requirements and dependencies, key migration factors and project timings.

Workshop Deliverables

Face-to-face or virtual meeting with key stakeholders, managed by 2 senior consultants to deliver:
- Technical migration strategy
- High-level design
- High-level Project Plan, including key milestones and dependencies
- Documented pre-requisites
- Confirmation of resources and project scope
- Project interaction and collaboration framework
- Statement of work and project budget

Workshop Objectives

The aim of the workshop is to achieve:
- A full understanding of requirements, by module and overall project
- Detailed discovery for each module
- Technical planning
- Resource planning
- Agree collaboration and report framework
- Identify risks and how to de-risk
- Building understanding between organisations
- Defining workstreams (email, training, etc)
